

HOW TO RUN A DIVING SCORE TABLE

A

(RECORDER)

- 1) Record judges' scores
- 2) Cross out high score and low score
- 3) Add remaining three scores together
- 4) Pass the diver's score sheet to the CALCULATOR

B

(CALCULATOR)

- 1) Using the "D.D. Slide Rule Calculator," locate the points earned for each dive and record it on the diver's sheet in the appropriate space.
- 2) After the first round of dives, add the running total of the divers' scores.
- 3) Pass the diver's sheet to the CHECKER.

C

(CHECKER)

- 1) When the dive sheets are passed to you, check to see if the scores agree.
- 2) If both dive sheets agree, turn the sheets over.
- 3) If the dive sheets DO NOT agree, find the mistake and correct it. If the mistake is in the recorded score, check with the MASTER SCORER (D) to see which sheet has the correct scores listed on it. If the difference is the Degree of Difficulty total, Check the D.D. Calculator. The error may also be in the addition of the diver's total score.
- 4) After several sheets agree, pass one set to the announcer and the other set to the opposite end of the table.
- 5) On the final round of dives, arrange the divers' sheets by total score immediately after you check each sheet.

D

(MASTER SCORER)

- 1) On a separate sheet of paper, keep a record of every divers' scores for each event. You are the "BACKUP" in case one of the Recorders recorded the wrong score.
- ** The Master Scorer DOES NOT cross out the high and low scores. For more accurate results, TWO Recorders and TWO Calculators should be used (See Diagram)
